

Dominik Gadzina

Web Developer

I am passionate about technology and creating innovative solutions, which is best exemplified by my project BookSelf - an advanced service booking platform that revolutionizes time and resource management in the beauty, wellness and healthcare industries. As part of the project, I created a comprehensive marketplace system using modern technologies such as Next.js React TailwindCSS Prisma which allows users to easily create and manage their own services. I am studying Applied Informatics at WSEI in Cracow (2nd semester), my greatest asset is the practical experience I gained from this project and my constant desire to improve my programming skills.
